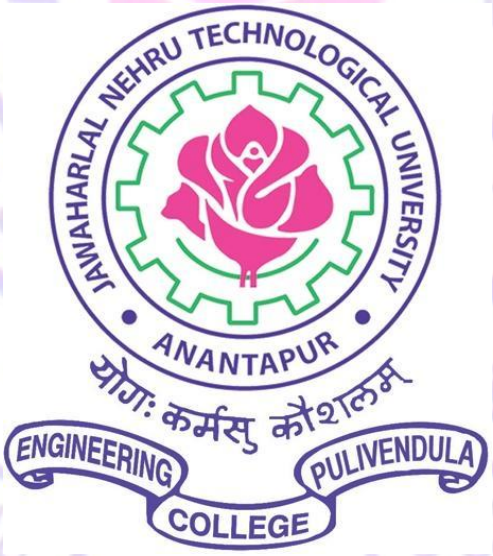
THREE YEAR COURSE STRUCTURE

FOR

PART TIME M.TECH – ELECTRONICS & *COMMUNICATION ENGINEERING(DECS)*

w.e.f.

2014-2015 ADMITTED BATCH



DEPARTMENT OF ELECTRONICS COMMUNICATION ENGINEERING

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY ANANTAPUR

COLLEGE OF ENGINEERING (AUTONOMOUS):: PULIVENDULA

Y.S.R. (DIST), ANDHRA PRADESH, INDIA – 516390.

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY ANANTAPUR
COLLEGE OF ENGINEERING (AUTONOMOUS), PULIVENDULA
Academic Regulations 2014 for M. Tech (PTPG)
(Applicable for the students admitted during the Academic Year 2014 -15 and onwards)

1. ELIGIBILITY FOR ADMISSION:

Admission to the above program shall be made subject to the eligibility, qualification and specialization prescribed by the University for each Program from time to time.

i. Admission shall be made either on the basis of merit/rank obtained by the qualifying candidates in written exam conducted by the University or otherwise specified, whichever is relevant.
ii. The candidates **must be employed** in and around Pulivendula Town.
iii. **COURSES OFFERED**

S.No.	Department	Specialization
01.	Electrical & Electronics Engineering (EEE)	Electrical Power Systems (EPS)
02.	Mechanical Engineering (ME)	Computer Aided Design & Computer Aided Manufacturing (CAD&CAM)
03.	Electronics & Communication Engineering (ECE)	Digital Electronics & Communication Systems (DECS)
04.	Computer Science & Engineering (CSE)	Computer Science & Engineering (CSE)

And any other course as approved by the competent authorities from time to time

2. AWARD OF M.TECH. DEGREE:

A student will be declared eligible for the award of the M.Tech degree if he/she fulfills the following academic regulations:

i. He/she has pursued a course of study for not less than six semesters and not more than twelve semesters.
ii. Students who fail to fulfill all the academic requirements for the award of the degree within twelve semesters from the year of their admission, shall forfeit their seat in the course and their seat shall stand cancelled.
iii. Register for 68 credits and secure all 68 credits

3. COURSE WORK:

The programs are offered on a semester basis consisting of six semesters.

i. The candidates undergo three theories and one laboratory course during the first and Third semesters and two theory and one laboratory courses during the second and fourth semesters. During the fifth and sixth semesters the candidates shall pursue the dissertation in the concerned specialization only. The theme of dissertation should conform to the specialization.

ii. There shall be **two seminars** (seminar-I, and seminar -II) related to thesis/dissertation. Out of two seminars related to thesis/dissertation, seminar-I shall be conducted in the V^{th} semester and the seminar-II will be in VI^{th} semester.

iii. A candidate has to either present a paper in any national or international conference organized by AICTE recognized college/institution, or, publish/get acceptance for publication of a paper in peer-reviewed journals before the submission of thesis.

iv. Only on successful completion of all the prescribed courses, the candidate will be permitted to submit the thesis/dissertation. Three copies of the thesis / dissertation certified by the supervisor in the prescribed form shall be submitted to the College. Once a student fails to submit the thesis within the stipulated period of six semesters, extension of time up to twelve semesters may be permitted by the Principal with recommendation of the College Academic Committee.

v. The Thesis/Dissertation will be adjudicated by one external examiner appointed by the Principal.

vi. If the report of the external examiner is favorable, a viva-voce examination shall be conducted by a board consisting of Head of the department, the supervisor and the external examiner who adjudicated the thesis / dissertation. The board shall jointly report the candidate's work as :

A - Excellent B - Good
C - Satisfactory D - Unsatisfactory

vii. If the report of the viva-voce is not satisfactory, the candidate will re-register for the viva-voce examination after three months by paying prescribed fee. If he/she fails to get a satisfactory report at the second viva-voce examination, he/she will not be eligible for the award of the degree unless the candidate is asked to revise and resubmit the thesis / dissertation.

4. EVALUATION:

The performance of the candidate in each semester program shall be evaluated subject wise, with a maximum of 100 marks for theory and 50 marks for practical examination, on the basis of Internal Evaluation and End external examination.

i. For the theory subjects 60% of the marks will be for the End external Examination and 40% of the marks will be for Internal Evaluation.

ii. There shall be five UNITs in each of the theory subjects.

iii. Two Midterm Examinations shall be held during the semester. First midterm examination shall be conducted for I & II UNIT syllabus and second midterm examination shall be conducted for the III, IV & V UNIT syllabus. In each midterm exam, a student shall answer all three questions in 2 hours of time without any choice. Final Internal marks for a total of 40 marks shall be arrived at by considering the marks secured by the student in both the mid examinations with 80% weightage to the better mid exam and 20% to the other.

iv. The following pattern shall be followed in the End Examination.
   a. Five questions shall be set from each of the five UNITs with either/or type for 12 marks each.
   b. All the questions have to be answered compulsorily.
   c. Each question may consist of one, two or more bits.

v. For practical subjects, 60% marks shall be for the End Examinations and 40% marks will be for internal evaluation. The end examination shall be conducted by the concerned laboratory teacher and another examiner from the same department

nominated by the Principal. The internal marks will be awarded by the concerned laboratory teacher based on the performance.

vi. For Seminar, there will be an internal evaluation for 100 marks, with 50 marks in each semester**.** The student shall give a seminar in each semester on the progress of his M.Tech. thesis. He/she has to secure a minimum of 50% to be declared successful. The assessment will be made by a Board consisting of Head of the Department, Thesis supervisor, and one senior faculty member.

vii. A candidate shall be deemed to have secured the minimum academic requirement in a subject if he secures a minimum of 40% of marks in the End Examination and a minimum aggregate of 50% of the total marks in the End Semester Examination and Internal Evaluation taken together.

viii. In case the candidate does not secure the minimum aggregate marks as specified in 5 (vii) he has to reappear for the semester examination, either in supplementary or in regular, in that subject.

5. **RE-REGISTRATION FOR IMPROVEMENT OF INTERNAL EVALUATION MARKS**

Following are the conditions to avail the benefit of improvement of internal evaluation marks.

i. The candidate should have completed the course work and obtained examinations results for I & II semesters.

ii. He should have passed all the subjects for which the Internal evaluation marks secured are more than 50%.

iii. Out of the theory subjects, if the candidate has failed to obtain 50% of total marks in any subject due to Internal evaluation marks secured being less than 20 marks (50%), then the candidate shall be given one chance for registration of that subject for Improvement of Internal evaluation marks. However, a candidate shall not be permitted for re-registration of more than three such theory subjects.

iv. For each subject, the candidate has to pay a fee equivalent to one third of the semester tuition fee.

vi. In the event of availing the Improvement of Internal evaluation marks, the internal evaluation marks as well as the End Examinations marks secured in the previous attempt(s) for the reregistered subjects shall stand cancelled.

6. ATTENDANCE:

The candidate shall put in a minimum of 75% attendance in aggregate of all subjects in a semester.

i. Condonation of shortage of attendance up to 10% in any subject i.e. from 65% and above and less than 75% may be given by the College Academic Committee.

ii. Condonation of shortage of attendance shall be granted only on genuine and valid reasons on representation by the candidate with supporting evidence.

iii. If the candidate has not satisfied the attendance requirements in a semester he/she will have to repeat that semester.

7. AWARD OF DEGREE AND CLASS:

A candidate shall be eligible for the award of M.Tech degree if he/she satisfies the minimum academic requirements in every subject and secures at least satisfactory report on his thesis/dissertation viva-voce examination.

First Class with Distinction	70% or more
First Class	Below 70% but not less than 60%
Second Class	Below 60% but not less than 50%

(The marks in internal evaluation and end examination shall be shown separately in the marks memorandum)

Further, percentage to the extent of 0.5% will be rounded off to next higher digit, to effect change of class from pass class to Second class, Second class to First class, First class to First class with distinction for all the courses being offered, without adding any marks to the original marks secured by the students.

8. WITHHOLDING OF RESULTS:

If the candidate has any dues not paid to the college or if any case of indiscipline or malpractice is pending against him, the result of the candidate shall be withheld and he will not be allowed /promoted into the next higher semester. The issue of awarding degree is liable to be withheld in such cases.

9. TRANSITORY REGULATIONS:

Candidates who have discontinued or have been detained for want of attendance or who have failed after having undergone the course are eligible for admission to the same or equivalent subjects as and when subjects are offered, subject to 4(viii) and 2(ii) and they will be in the academic regulations into which the candidate is presently readmitted.

10. GENERAL:

The academic regulations should be read as a whole for purpose of any interpretation.

i. The college reserves the right of altering the regulations as and when necessary. The regulations altered may be applicable to all the candidates on rolls.
ii. Wherever the word he, him or his occur, it will also includes she, her.
iii. There shall be no place transfer within the constituent colleges of Jawaharlal Nehru Technological University Anantapur during the entire course of the programme.

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY ANANTAPUR
COLLEGE OF ENGINEERING, PULIVENDULA (AUTONOMUS)
PULIVENDULA -516390(A.P) India.

Course structure for M.Tech (PTPG) DIGITAL ELECTRONICS COMMUNICATION ENGINEERING (Reg) with effective from 2014-15

M.Tech (PTPG)-I SEMESTER:

S.No.	COURSE CODE	SUBJECT	Theory	Lab	Credits
1	13PT38101	Structural Digital System Design	4	--	4
2	13PT38102	Digital Communication Techniques	4	--	4
3		**Elective-I**	4	--	4
	13PT38103	Advanced operating Systems			
	13PT38104	Mobile Networks			
	13PT38105	Transform Techniques			
4	13PT38106	Structural Digital System Design Lab	--	3	2
		TOTAL	**12**	**3**	**14**

M.Tech (PTPG)-II SEMESTER:

S.No.	COURSE CODE	SUBJECT	Theory	Lab	Credits
1.	13PT38201	Advanced Computer Networks	4	--	4
2.		**Elective-II**	4	--	4
	13PT38202	Nano Electronics			
	13PT38203	Secured Communications			
	13PT38204	Adaptive Signal Processing			
3.	13PT38205	Networking Lab	--	3	2
		TOTAL	**08**	**3**	**10**

M.Tech (PTPG)-III SEMESTER:

S.No.	COURSE CODE	SUBJECT	Theory	Lab	Credits
1.	13PT38301	Image & Video Processing	4	--	4
2.	13PT38302	Detection and Estimation Theory	4	--	4
3.		**Elective-III**	4	--	4
	13PT38303	Embedded System Design			
	13PT38304	Fuzzy Systems and Neural Networks			
	13PT38305	Wireless Sensor Networks			
4.	13PT38306	Image & Video Processing Lab	--	3	2
		TOTAL	**12**	**3**	**14**

M.Tech (PTPG) – IV SEMESTER:

S.No.	COURSE CODE	SUBJECT	Theory	Lab	Credits
1.	13PT38401	Wireless Communications	4	--	4
2.		**Elective-IV**	4	--	4
	13PT38402	Speech Processing			
	13PT38403	Software Define Radio			
	13PT38404	Multimedia Communications			
3.	13PT38405	Advanced Communications Lab	--	3	2
TOTAL			**08**	**3**	**10**

			Internal	External		
1.	13PT38601	Thesis Seminar – II	50	-	50	-
2.	13PT38602	Project Work Grades: A, B, C, D A – Excellent B – Good C – Satisfactory D – Unsatisfactory	---	---	---	20

M.Tech (PTPG) I SEM (DECS)

STRUCTURAL DIGITAL SYSTEM DESIGN

L	T	P	C
4	0	0	4

Course Objectives:

- To study about structural functionality of different Digital blocks (Both combinational and Sequential)
- To provide an exposure to ASM charts, their notations and their realizations.
- To provide an exposure to VHDL and different styles of modelling using VHDL.
- To introduce concept of micro programming and study issues related to micro programming

Learning Outcomes:

After Completion of this course students will be able to

- Understand structural functionality of different digital blocks
- Represent and Realize their designs in ASM charts
- Represent their designs in different modelling styles by using VHDL
- Understand concept of Micro program and issues related to micro programming

UNIT-I

Combinational Circuit Building Blocks: Multiplexers, Demultiplexers, Encoders, Decoders, Comparators, Adders, ALU, Carry look Ahead adder.

SEQUENTIAL CIRCUIT BUILDING BLOCKS: Flip-flops, registers, Memory elements, Shift Registers, Sequence Generators, Timing Generators.

UNIT-II

Modelling with HDL:

Introduction to VHDL/Verilog, Modelling Styles in VHDL/Verilog (Data Flow, Behavioral, Structural and Mixed style modelling using HDL).

System Design Methodology:

Finite State Machine, RTL Design, Realization and implementation of Dice Game, Micro Programming, Linked State machines, RTL Implementation Options.

UNIT-III

Design of Combinational Logic:

BCD to 7-Segment Display decoder, BCD Adder, Arithmetic and Logic UNIT (ALU), State graphs for control circuits, score board and controller, Synchronization and debouncing,A Shift and Add Multiplier, Array Multiplier, Booth Multiplier.

UNIT-IV

Design Of Sequential Logic:

Design Procedure for sequential circuits, Design Example- code Converter, Design of Iterative circuits, Design of sequential circuits using ROMs and PLAs, sequential circuit design using CPLD, FPGAs, Reduction of state and Flow Tables, Race-Free State Assignment Hazards.

Design Examples: UART, Traffic Light Controller

UNIT-V

Hardware Testing and Design for Testability: Testing combinational Logic, Testing sequential Logic, Scan Testing, Boundary Scan, Built in Self Test.

Text Books:

1. Charles H.Roth jr, Lizy Kurian John, "Digital System Design Using VHDL", CENGAGE Learning, 2013.

2. Ming-Bio Lin, "Digital System Design and Pratices using Verilog HDL and FPGAs" , Willey India Edition, 2012.

References:

1. Charles H. Roth,Jr., "Fundamentals of Logic Design", 5th edition, CENGAGE Learning, 2012.

2. Z. Kohavi , "Switching & finite Automata Theory" ,TMH.

3.Michael D. Cilleti, "Advanced Digital Design with Verilog HDL", PHI, 2013.

4. William Fletcher, An Engineering Approach to Digital Design, 1st Edition, Prentice-Hall India, 1997.

5. William J Dally and John W Poulton, Digital Systems Engineering, Cambridge University Press, 2008.

M.Tech (PTPG) I SEM (DECS)

DIGITAL COMMUNICATION TECHNIQUES

L	T	P	C
4	0	0	4

Course Objectives:

- To study about base band signal concepts and different equalizers.
- To study in detail about coherent detection schemes such as ASK, FSK, PSK
- To study in detail about M'ary signalling schemes like QPSK, QAM, MSK.

Learning Outcomes:

- Students will be aware of base band signal concepts and different equalizers.
- Students will be able to get complete knowledge regarding coherent detection schemes like ASK, FSK, PSK.
- Students will be able to design M'ary signalling schemes like QPSK, QAM, MSK

UNIT I

Review of Random Variables and Random Processes:

Random variable, Moment generating function, Markov's inequality, Chebyshev's inequality, Central limit theorem, Different distributions – Gaussian, Poisson, Chi square, Rayleigh, Rician; Correlation - Auto-correlation, Cross correlation, Correlation matrix; Stationary processes, Wide sense stationary processes, Gaussian & Ergodic processes, Problem solving.

UNIT II

Baseband Signal Concepts:

Baseband data transmission, Nyquist criterion for zero ISI, Correlative level coding, Data Detection, Optimum design of transmit and receive filters, Equalization - Linear, adaptive, fractionally spaced and decision feedback equalizers.

UNIT III

Digital Modulation Schemes:

Detection using matched filter – Optimum receivers for arbitrary binary signals and M'ary Orthogonal signals, Analysis of coherent detection schemes for ASK, PSK and DPSK, M'ary signaling schemes – QPSK, QAM, MSK, Performance of the data transmission schemes under AWGN. Trellis coded Modulation.

UNIT IV

Synchronization:

Receiver synchronization, costas loop, symbol synchronization, synchronization with CPM – data aided and Non aided synchronization- synchronization methods based on properties of wide sense cyclo-stationary random process – Carrier recovery circuits – Symbol clock estimation schemes.

UNIT V

Spread Spectrum Systems:

PN sequences, Generation of PN sequences, DS spread spectrum systems, FH spread spectrum systems and performance of DSSS & FHSS in AWGN – Synchronization – Jamming considerations – Commercial Applications, Cellular subsystems.

Text Books:

1. J.G.Proakis, Digital Communication (4/e), McGraw- Hill, 2001
2. Bernard Sklar, "Digital Communications – Fundamentals &Applications,"Prentice Hall, 2001.

Reference Books:

1. S.Haykin, Communication Systems (4/e), Wiley, 2001.
2. R.E.Zimer & R.L.Peterson : Introduction to Digital Communication, PHI, 2001.
3. G. R. Cooper & C. D. Mc Gillem, "Modern Communications & Spread Spectrum,"McGraw Hill, 1986.
4. L.Hanzo etal, Turbo Coding, Turbo Equalization & Space-Time Coding Wiley,2002.

M.Tech (PTPG) I SEM (DECS)

ADVANCED OPERATING SYSTEMS
(ELECTIVE I)

L	T	P	C
4	0	0	4

Course Objectives:

- To Study in detail about kernel structures associated with various Operating systems
- To Study in detail about various systems calls, statements and their arguments associated with Unix .
- To Study in detail about various systems calls, statements and their arguments associated with Linux .

Learning Outcomes:

After completion of the course students will be able to

- Get complete knowledge regarding different types of operating systems and their Kernel structures.
- To work effectively on Unix Platform
- To work effectively on Linux Platform

UNIT I

INTRODUCTION

General Overview of the System : History – System structure – User perspective – Operating system services – Assumptions about hardware. Introduction to the Kernel : Architecture of the UNIX operating system – Introduction to system concepts. The Buffer Cache: Buffer headers – Structure of the buffer pool – Scenarios for retrieval of a buffer – Reading and writing disk blocks – Advantages and disadvantages of the buffer cache.

UNIT II

UNIX I: Overview of UNIX system, Structure, files systems, type of file, ordinary & Special files, file permissions, Introduction to shell.UNIX basic commands & command arguments, Standard input / output Input / output redirection, filters and editors, System calls related file structures, input / output process creation & termination.

UNIT III

Interprocess Communication in Unix: Introduction, file and record locking, Client – Server example, pipes, FIFOs, Streams & Messages, Name Speces, Systems V IPC, Message queues, Semaphores, Shared Memory, Sockets & TLI.

UNIT IV

Introduction to Networks and Network Programming in Unix: Network Primer, TCP/IP, Internet Protocols, Socket Programming, Introduction & overview, UNIX domain protocols, Socket Addresses, Elementary Socket system calls, Simple examples.

UNIT V

LINUX: Introduction to LINUX System, Editors and Utilities, Type of Shells, Shell Operations, File structure, File Management, Operations. Memory Management Policies: Swapping – Demand paging. The I/O Subsystem: Driver Interface – Disk Drivers – Terminal Drivers– Streams – Inter process communication.

TEXT BOOKS:

1. Maurice J.Bach, "The design of the UNIX Operating Systems", PHI
2. Kernighan & Pike, "The UNIX Programming Environment", PHI

REFERENCES:

M.Tech (PTPG) I SEM (DECS)

MOBILE NETWORKS
(ELECTIVE I)

L	T	P	C
4	0	0	4

Course Objectives:

- To study different wireless communication systems
- To study in detail about different multiples accessing schemes
- To study about different architectures in mobile networks such as wireless LAN, Hyper LAN and so on
- To study about dynamic routing and different routing protocols employed in mobile networks

Learning Outcomes:

After completion of the course the student will be able to

- Gain complete knowledge regarding different wireless communication systems.
- Gain complete knowledge regarding different multiples accessing schemes.
- Know the architectures of different mobile networks such as wireless LAN , Hyper LAN and so on

Know about different routing mechanisms by employing different routing protocols

UNIT-I

Wireless communication standards, Cellular communications, GSM protocol architecture,, 3G mobile wireless systems, Beyond 3G

UNIT - II

Multiple Access Techniques - GDMA, TDMA, CDMA, Mobile Data Networks - CDPD, GPRS

UNIT-III

Wireless LAN architecture, physical & MAC layers, Wireless ATM architecture, HIPERLAN, Wireless Personal Area (WPAN) networks - Home RF, Bluetooth.

UNIT-IV

Mobility management in Wireless Networks, Handoff management, Location management , Mobile IP, TCP Wireless Application Protocol

UNIT - V

Mobile Adhoc Networks, Dynamic routing, Route discovery, Routing protocols, Mobile Multimedia Adhoc Networks, MPLS

Text Books:

1. JW Mark , W Zhuang, "Wireless communications & Networking", PHI, 2005
2. Kaveh Pahlavan, Prashant Krishnamurthy, "Principles of Wireless Networks", PHI, 2010
3. George Aggelou, "Mobile Adhoc Networks", TMH, 2009.

M.Tech (PTPG) I SEM (DECS)

TRANSFORM TECHNIQUES
(ELECTIVE I)

L T P C
4 0 0 4

Course Objectives:

- Study of different types of transforms which can be applicable for different types of signals.
- To study the application of wavelets for different types of signals.
- To study the applications of Multi rate systems and filter banks.

Learning Outcomes:

After completion of the course the student will be able to

- Use different 1-d and 2-d transforms for different signals.
- Apply wavelet transforms for different signals and will be able to appreciate its differences with other transformations.
- Use different advanced transforms such as DCT, DWT and KLT for different applications like signal de noisy, sub band coding of speech and music and signal compression.

UNIT I:

Review of Transforms: Signal spaces, concept of convergence, Hilbert spaces for energy signals, Orthogonality, Ortho normality, Fourier basis, FT-failure of FT-need for time-frequency analysis, spectrogram plot-phase space plot in time-frequency plane, Continuous FT, DTFT, Discrete Fourier Series and Transforms, Z-Transform.

Advance Transforms

Relation between CFT-DTFT, DTFT-DFS, DFS-DFT, DCT (1D&2D), Walsh, Hadamard, Haar, Slant, KLT, Hilbert Transforms – definition, properties and applications.

UNIT II:

CWT & MRA: Time-frequency limitations, tiling of time-frequency plane for STFT, Heisenberg uncertainty principle, Short time Fourier Transform (STFT) analysis, short comings of STFT.

NEED FOR WAVELETS: Wavelet Basis- Concept of Scale and its relation with frequency, Continuous time wavelet Transform Equation- Series Expansion using Wavelets- CWT.

UNIT III:

Need for Scaling Function: Multi resolution analysis, Tiling of time scale plane for CWT. Important Wavelets: Haar, Mexican Hat Meyer, Shannon, Daubechies.

SPECIAL TOPICS: Wavelet Packet Transform, Bi-orthogonal basis- B-splines, Lifting Scheme of Wavelet Generation-implementation.

UNIT IV:

Multirate Systems, Filter Banks and DWT: Basics of Decimation and Interpolation in time & frequency domains, Two-channel Filter bank, Perfect Reconstruction Condition, Relationship between Filter Banks and Wavelet basis, DWT Filter Banks for Daubechies Wavelet Function.

UNIT V:

Applications of Transforms: Signal De-noising, Sub-band Coding of Speech and Music, Signal Compression - Use of DCT, DWT, KLT.

STRUCTURAL DIGITAL SYSTEM DESIGN LAB

L	T	P	C
0	0	3	2

Using VHDL and Verilog do the following experiments

1. Design of 4-bit adder / subtractor
2. Design of Booth Multiplier
3. Design of 4-bit ALU
4. Design 32-bit ALU using ripple carry and carry look-ahead logic
5. Design of counters and shift registers
6. Design of MIPS processor
7. Design of Washing machine controller
8. Design of Traffic Light Controller
9. Mini project

M.Tech (PTPG) II SEM (DECS)

ADVANCED COMPUTER NETWORKS

L	T	P	C
4	0	0	4

Course Objectives:

- To study about different protocols related to advanced computer networks such as wireless Lans, Wimax and so on.
- To study about security features associated with different advanced computer networks.

Learning Outcomes:

After completion of this course students will be able to

- Know the functioning different protocols associated with modern computer network system
- Know the security features associated with modern computer network system.

UNIT-I

Review of data communication standards, topologies, OSI, TCP/IP models, Transmission media, circuit switched networks, packet switched networks, Point to Point Protocol (PPP), Asymmetric Digital Subscriber Line (ADSL)

UNIT-II

Fast Ethernet, Gigabit Ethernet, Wireless LANs, Bluetooth, WiMax, Virtual LANs,

UNIT-III

Advanced Network Architectures - SONET/SDH, Frame Relay and ATM architectures and services, VPN architectures, IP over ATM, MPLS, RSVP

UNIT-IV

IPv6 protocol, Socket interface, Domain Name System, Simple Mail Transfer Protocol, WWW and HTTP, Simple Network Management Protocol

UNIT-V

Voice Over IP, Cryptography, Network security, Digital Signatures, IPSec, Firewalls,

Text Books :

M.Tech (PTPG) II SEM (DECS)

NANO ELECTRONICS

(Elective - II)

L	T	P	C
4	0	0	4

Course Objectives:

- To study about different quantum devices
- To study in detail about nano devices and nano architectures and their computations
- To study about Molecular nano Electronics

Learning Outcomes:

After completion of the course the student will be able to

- Gain complete knowledge regarding different Quantum Devices.
- Know about nano devices and nano architectures and their computations.
- Know about Molecular Nano Electronics

UNIT – I: Quantum Devices:

Charge and spin in single quantum dots- Coulomb blockade – Electrons in mesoscopic structures - single electron transfer devices (SETs) – Electron spin transistor – resonant tunnel diodes, tunnel FETs - quantum interference transistors (QUITs) - quantum dot cellular automata (QCAs) - quantum bits (qubits).

UNIT – II: Nano Electronic Devices:

Electronic transport in 1,2 and 3 dimensions- Quantum confinement - energy subbands - Effective mass - Drude conduction - mean free path in 3D - ballistic conduction - phase coherence length - quantized conductance - Buttiker-Landauer formula- electron transport in pn junctions - short channel NanoTransistor –MOSFETs - Advanced MOSFETs - Trigate FETs, FinFETs - CMOS.

UNIT – III: Molecular NanoElectronics:

Electronic and optoelectronic properties of molecular materials - Electrodes & contacts – functions – molecular electronic devices - elementary circuits using organic molecules- Organic materials based rectifying diode switches – TFTs- OLEDs- OTFTs – logic switches.

UNIT – IV: Spintronics:

Spin tunneling devices - Magnetic tunnel junctions- Tunneling spin polarization - Giant tunneling using MgO tunnel barriers - Tunnel-based spin injectors - Spin injection and spin transport in hybrid nanostructures - spin filters -spin diodes - Magnetic tunnel transistor - Memory devices and sensors - ferroelectric random access memory- MRAMS -Field Sensors - Multiferro electric sensors- Spintronic Biosensors.

UNIT – V: NanoElectronic Architectures & Computations:

Architecture Principles: Mono and Multi processor systems – Parallel data processing – Power Dissipation and Parallelism – Classic systolic arrays - Molecular devices-properties - Self-organization – Size dependent -limitations. Computation: Monte Carlo Simulations- Computational methods and Simulations from ab initio to multiscale Modeling- Modeling of Nanodevices.

SECURED COMMUNICATIONS

(ELECTIVE II)

L	T	P	C
4	0	0	4

Course Objectives:

- To study security and different types of attacks.
- To study about different techniques associated with encryption.
- To study about different algorithms associated with security.
- To study about IP security architecture and designing issues related to fire walls.

Learning Outcomes:

After completion of this course students will be able to know

- The need and role of security.
- Gain knowledge about different techniques associated with encryption.
- Functioning of different algorithms associated with security.
- Gain knowledge regarding IP security architecture and designing issues related to fire walls.

UNIT-I

Information security, Types of attacks, Info security services - Confidentiality, Integrity, Availability, security process - assessment, Implement security, training

UNIT - II

Security technologies - Firewalls, VPNs ; Encryption - Private Key Encryption, Public key encryption, Key management; Concepts of intrusion detection.

UNIT-III

Message authentications and Hash functions, Digital signatures, e-mail security, IP security architecture, Web security

UNIT-IV

Authentication and authorization in WLANs -802.1X authentication, RADIUS protocol; Extensible Authentication protocol, Transport Layer Security and certificates

UNIT - V

Data protection in WLANs - WEP, 802.11i security, RSNA, CCMP, TKIP, wireless roaming security, WMAN security.

ADAPTIVE SIGNAL PROCESSING
(ELECTIVE II)

L	T	P	C
4	0	0	4

Course Objectives:

- To study in detail about adaptive Systems.
- To study about various Linear optimum filtering techniques.
- To study about various techniques related Linear and Non Linear adaptive filtering.

Learning outcomes:

After the course students is expected to be able to:

- Get complete knowledge regarding adaptive systems
- Design various Linear optimum filters by employing different techniques associated with them

Understand various techniques related to with Linear and Non linear adaptive filtering and their design considerations

UNIT I:

Introduction to Adaptive Systems: Eigen Analysis - Eigen Value problem, Properties of eigen values and eigen vectors, Eigen filters, Eigen value computations, Adaptive Systems - Definitions, Characteristics, Applications and Examples of Adaptive systems, The adaptive linear combiner – Description, weight vectors, Desired response performance function, Gradient and Mean square error(MSE).

UNIT II:

Linear Optimum Filtering: Wiener Filters – Linear optimum filtering, Principle of Orthogonality, Wiener-Hopf equations, Error performance surface, Channel Equalization, Linearly constrained minimum variance filter, Linear Prediction – Forward and Backward linear prediction, Levinson-Durbin Algorithm, Properties of prediction error filters, AR modeling of stationary stochastic process, Lattice predictors, Joint process estimation, Kalman Filters - Recursive mean square estimation for scalar random variables, Kalman filtering problem, The innovations process, Estimation of the state using innovations process, Filtering, Initial conditions, Variants of the Kalman filter, Extended Kalman filter, Problem Solving.

UNIT III:

Linear Adaptive Filtering-I: Method of Steepest descent algorithm and its stability, Least Means Square (LMS) algorithm – Structure & operation of LMS algorithm, Examples, Stability & performance analysis of the LMS algorithm, Simulations of Adaptive equalization using LMS algorithm, Convergence aspects, Method of Least Squares (LS) - Statement, Data windowing, Minimum sum of error squares, Normal equations and linear least squares filters, Properties.

UNIT IV

Linear Adaptive Filtering-II Recursive Least Squares (RLS) Algorithm – Matrix inversion lemma, The exponentially weighted RLS algorithm, Update recursion for the sum of weighted error squares, Example, Convergence Analysis, Simulation of adaptive equalization using RLS algorithm, Order Recursive Adaptive Filters – Adaptive forward and backward linear prediction, Least squares Lattice predictor, QR-Decomposition based Least squares Lattice filters & their properties, Simulation of Adaptive equalization using Lattice Filter.

UNIT V:

Non linear Adaptive Filtering: Blind deconvolution – Theoretical and practical considerations, Bussgang algorithm for blind equalization for real base band channels, Special cases of Bussgang algorithm, Simulation studies of Bussgang algorithms, Problem solving.

NETWORKING LAB

L	T	P	C
0	0	3	2

1. Study of network topologies
2. Open system for interconnection (OSI)
3. Routing analysis: Implement the routers and forward network packets via multiple subnets.
4. Connecting devices: The behavior and performance of the different connecting devices like switch, hub, router etc.
5. Point to point protocol and point to point protocol options
6. TCL script for creating nodes, duplex link, orientation, Label and Queue.
7. TCL script for bandwidth and delay configuration between Nodes
8. TCL script to create a network which consists of eight nodes then set the bandwidth, delay and queue size of the link between the nodes
9. TCL script for TCP communication between two Clients and a End server
10. TCL script for UDP communication
11. TCL script to drop down the packets in particular link at specific time
12. To the above problem, write a TCL script to define a LAN through which a group of nodes is connected TCL script to create ring topology

M.Tech (PTPG) III SEM (DECS)

IMAGE AND VIDEO PROCESSING

L	T	P	C
4	0	0	4

Course Objectives:

- To understand different transforms related to gray scale and color images.
- To get complete knowledge regarding different techniques associated with Image Enhancement, Image Restoration, Image Segmentation and Image Compression.
- To get clear knowledge regarding motion estimation, video filtering and video standards

Learning Outcomes:

After completion of this course the students will be able to

- Different transforms related to gray scale and color images.
- Complete knowledge regarding different techniques associated with Image Enhancement, Image Restoration, Image Segmentation and Image Compression.
- Understand basic concepts regarding to motion estimation, video filtering and video standards.

UNIT I

Image Fundamentals & Transforms: Gray scale and colour Images, image sampling and quantization. Two dimensional orthogonal transforms: DFT, WHT, Haar transform, KLT, DCT.

UNIT II

Image Enhancement: Filters in spatial and frequency domains, histogram-based processing, homomorphic filtering. Edge detection, non parametric and model based approaches, LOG filters, localization problem.

Image Restoration: Degradation Models, PSF, circulant and block - circulant matrices, deconvolution, restoration using inverse filtering, Wiener filtering and maximum entropy-based methods.

UNIT III

Image Segmentation: Pixel classification, Bi-level Thresholding, Multi-level Thresholding, P-tile method, Adaptive Thresholding, Spectral & spatial classification, Edge detection, Hough transform, Region growing.

UNIT IV

Image Compression: Compression models, Information theoretic perspective, Fundamental coding theorem. Huffman Coding, Arithmetic coding, Bit plane coding, Run length coding, Lossy compression: Transform coding, Image compression standards.

UNIT V

Video Processing: Representation of Digital Video, Spatio-temporal sampling, Motion Estimation. Video Filtering, Video Compression, Video coding standards.

DETECTION AND ESTIMATION THEORY

L	T	P	C
4	0	0	4

Course Objectives:

1. To provide knowledge about various estimation, and detection techniques.
2. To analyze different methods & to detect and estimate the signal from noisy signal.
3. Estimate and detect the signals in the presence of noise.

Learning Outcomes:

1. The students will be able to apply various methods of signal estimation knowing the significance of each method.
2. The students will be able to know Cramer-Rao Lower bound in estimating a signal.

By applying suitable criterion the students will be able to detect the signals with minimum errors in the presence of noise.

UNIT - I

Introduction to Estimation and Detection:

Introduction, Detection and Estimation in Signal Processing, the Mathematical Detection& Estimation problem, Assessing Estimator Performance, Hierarchy of detection problems, Role of asymptotics.

ESTIMATION

UNIT - II

Minimum Variance Unbiased Estimation:

Unbiased Estimators, Minimum Variance Criterion, Existence of the minimum Variance Unbiased Estimator, Finding the Minimum Variance Unbiased Estimator,

Cramer-Rao Lower Bound - Estimator of Accuracy Considerations, Cramer-Rao Lower Bound (CRLB), General CRLB for Signals in White Gaussian Noise, Transformation of Parameters, Extension to a Vector Paramter, Vector Parameter CRLB for Transformations, CRLB for the general Gaussian case,

Linear Models -Definition and Properties, Linear Model Examples, Extension to the Linear Model, General Minimum Variance Unbiased Estimation: Introduction, Sufficient Statistics, Finding Sufficient Statistics.

UNIT - III

Best Linear Unbiased Estimators:

Definition of BLUE, Finding the BLUE, Extension to Vector Parameter,

Estimation Methods - Maximum Likelihood Estimation (MLE), Finding MLE, Properties of MLE, MLE for Transformed Parameters, Numerical Determination of the MLE, Extension to a Vector Parameter, The Least Squares Approach, Linear Least Squares, Method of Moments, Extension to a Vector Parameter, Statistical Evaluation of Estimators.

The Basian Philosophy - Prior Knowledge and Estimation, Choosing a Prior PDF, Properties of Gaussian PDF, Basian Linear Model, Minimum Mean Square Error (MMSE) Estimators, Maximum A Posteriori Estimators, Performance Description, Linear Basian Estimators – Introduction, Linear MMSE Estimation, Geometrical Interpretations, The Vector LMMSE Estimator.

DETECTION

UNIT - IV

Statistical Decision Theory I:

Introduction, Neyman-Pearson Theorem, Receiver Operating Characteristics, Minimum Probability of Error, Bayes Risk, Multiple Hypothesis Testing,

Deterministic Signals - Matched Filters, Development of Detector, Performance of Matched Filter, Performance of Generalized Matched Filters, Multiple Signals – Binary Case and its performance, M-ary Case, Linear Model, Random Signals– Estimator Correlator, Linear Model.

UNIT - V

Statistical Decision Theory II:

Introduction, Summary of Composite Hypothesis, Composite Hypothesis Testing (CHT),

CHT approaches – Bayesian Approach, Generalized Likelihood Approach, Performance of GLRT for Large Data Records, Equivalent Large Data Records Tests.

EMBEDDED SYSTEM DESIGN
(ELECTIVE - III)

L	T	P	C
4	0	0	4

Course Objectives:

- To study about current technologies, integration methods and hardware and software design concepts associated with processor in Embedded Systems.
- To study about different types of memory and memory management schemes and various interfacing devices related to design of an Embedded System
- To get detail knowledge regarding testing and hardware software co- design issues pertaining to design of an Embedded System

Learning Outcomes:

After completion of this course the students will be able to understand

- Gets clear knowledge regarding current technologies and issues relating to hardware and software design concepts associated with processor in Embedded Systems.
- Get complete knowledge pertaining to different types of memory and memory management schemes and various interfacing devices related to design of an Embedded System.
- Different techniques related to testing and hardware software co- design issues pertaining to design of an Embedded System.

UNIT-I: Introduction

An Embedded System-Definition, Examples, Current Technologies, Integration in system Design, Embedded system design flow, hardware design concepts, software development, processor in an embedded system and other hardware UNITs, introduction to processor based embedded system design concepts.

UNIT-II: Embedded Hardware

Embedded hardware building blocks, Embedded Processors – ISA architecture models, Internal processor design, processor performance, Board Memory – ROM, RAM, Auxiliary Memory, Memory Management of External Memory, Board Memory and performance.

Embedded board Input / output – Serial versus Parallel I/O, interfacing the I/O components, I/O components and performance, Board buses – Bus arbitration and timing, Integrating the Bus with other board components, Bus performance.

UNIT-III: Embedded Software

Device drivers, Device Drivers for interrupt-Handling, Memory device drivers, On-board bus device drivers, Board I/O drivers, Explanation about above drivers with suitable examples.

Embedded operating systems – Multitasking and process Management, Memory Management, I/O and file system management, OS standards example – POSIX, OS performance guidelines, Board support packages, Middleware and Application Software – Middle ware, Middleware examples, Application layer software examples.

UNIT-IV: Embedded System Design, Development, Implementation and Testing

Embedded system design and development lifecycle model, creating an embedded system architecture, introduction to embedded software development process and tools- Host and Target machines, linking and locating software, Getting embedded software into the target system, issues in Hardware-Software design and co-design.

Implementing the design-The main software utility tool, CAD and the hardware, Translation tools, Debugging tools, testing on host machine, simulators, Laboratory tools, System Boot-Up.

UNIT-V: Embedded System Design-Case Studies

Case studies- Processor design approach of an embedded system –Power PC Processor based and Micro Blaze Processor based Embedded system design on Xilinx platform-NiosII Processor based Embedded system design on Altera platform-Respective Processor architectures should be taken into consideration while designing an Embedded System.

FUZZY SYSTEMS AND NEURAL NETWORKS

(ELECTIVE - III)

L	T	P	C
4	0	0	4

Course Objectives:

- To analyze basic neural computational models.
- To get in detail knowledge regarding different algorithms related to neural learning
- To study about different issues related probability and fuzziness and different types of fuzzy associative memories.

Learning Outcomes:

After completion of this course the students will be able to

- Understand functioning of basic neural computational models.
- Get complete knowledge regarding different algorithms related to neural learning
- Understand about different issues related probability and fuzziness and different types of fuzzy associative memories.

UNIT-I

Basic Neural Computational Models: Basic concepts of Neural Nets, Inference and learning , Classification models (single layer Perceptrons, multi layer perceptrons), Association models (Hop field Nets, Bidirectional associative memories)

UNIT - II

Supervised and Unsupervised learning; Statistical learning; Neural Network learning (Back propagation, Radial basis Function Networks, ART Networks)

UNIT - III

Rule-Based Neural networks; Network Training; Decision Tree Based NN's; INCREMENTAL LEARNING: Principles; Symbolic methods; Neural Network Approaches (Probabilistic NN's); Incremental RBCN.

UNIT-IV

Fuzziness VS Probability: Fuzzy Sets & Systems; The Geometry of Fuzzy sets; The Fuzzy Entropy Theorem; The Subsethood Theorem; The Entropy Subsethood Theorem.

UNIT - V

Fuzzy Associative Memories: Fuzzy & Neural Function Estimators; Fuzzy Hebbian FAMs; Adaptive FAMs.

Comparison of Fuzzy & Neural Systems: Case Studies.

WIRELESS SENSOR NETWORKS

(ELECTIVE - III)

L	T	P	C
4	0	0	4

Course Objectives:

- To study about different types of sensor networks, advantages, applications and the mechanism of transportation and processing involved in Wireless Sensor Networks.
- To study about representation and different protocols and mechanisms involved in routing of Wireless Sensor Networks.
- To study about tools and simulators associated with Wireless Sensor Networks.

Learning Outcomes:

After completion of this course the students will be able to

- Understand different types of sensor networks, advantages, applications and the mechanism of transportation and processing involved in Wireless Sensor Networks.
- Understand about representation and different protocols and mechanisms involved in routing of Wireless Sensor Networks.
- Gets complete knowledge regarding different tools and simulators associated with Wireless Sensor Networks.

UNIT-I

Sensor networks, advantages and applications, Sensor Network Applications - Habitat Monitoring, Smart Transportation, Collaborative Processing

UNIT - II

Localization and tracking,- sensing model, Distributed Representation, Tracking Multiple Objects networking sensors- Medium Access Control, Energy-Aware Routing to a Region, Attribute-Based Routing

UNIT-III

Infrastructure Establishment -Clustering and time synchronizations, Localization and localization services, Sensor tracking and control - Task-Driven Sensing, Information-Based Sensor Tasking, Sensor Group Management

UNIT-IV

Sensor Network data bases - Sensor Database Challenges , Query Interfaces , Data-Centric Storage, Multidimensional Indices for Orthogonal Range Searching, Locality-Preserving Hashing

UNIT - V

Sensor Network Platforms and Tools -Sensor Network hardware, Node level software, Node-Level Simulators, wireless sensor networks positioning and location management.

IMAGE & VIDEO PROCESSING LAB

L	T	P	C
0	0	3	2

List of Experiments:

The students are required to simulate the following experimental parts on the MATLAB environment by considering the relevant application based examples.

PART-A: Image Processing

1. Image Enhancement.
2. Enhancement in Frequency Domain.
3. Image Segmentation.
4. Image Compression.
5. Morphological Operations.

PART-B: Video Processing

1. Representation of Digital video: Read, Write, View Videos and conversion of videos in different formats.
2. Spatio-temporal sampling of Videos
3. Video motion estimation
4. Videos filtering.
5. Video Compression.

Tools Required: MATLAB – 7.0 & above

M.Tech (PTPG) IV Sem (DECS)

WIRELESS COMMUNICATIONS

L	T	P	C
4	0	0	4

Course Objectives:

- To understand basics of Wireless Communications and its evolution process.
- To learn about the mechanism of radio mobile propagation and its effects.
- To understand various types of diversity and equalization techniques to counter balance the effects of Wireless Channel.
- To Study about importance of Wireless Networking and multiple access techniques in the present day mobile communications
- To design and analyze mobile systems using OFDM technology for mitigating the ISI effects at higher data rates.

Learning Outcomes:

After completion of this course the students will be able to

- Understand basics of Wireless Communications and its evolution process.
- Know about the mechanism of radio mobile propagation and its effects.
- Apply various types of diversity and equalization techniques to counter balance the effects of Wireless Channel.
- Recognize the importance of Wireless Networking and multiple access techniques in the present day mobile communications

Analyze and design mobile systems using OFDM technology for mitigating the ISI effects at higher data rates.

UNIT – 1

Introduction to Wireless Communication Systems& Cellular Concept:

Evolution of Mobile Radio Communication Systems, Examples of Wireless Communication Systems, 1G, 2G, 2.5G, and 3G Wireless Cellular Networks and Standards, Frequency Reuse Concept, Channel Assignment Strategies, Interference and System Capacity, Trunking and Grade of Service, Improving Coverage and Capacity in Cellular Systems, Problem Solving.

UNIT - 2

Mobile Radio Propagation:

Large Scale Path Loss: Introduction, Free Space Propagation Model, Propagation Mechanisms – Reflection, Diffraction, and Scattering, Practical Budget Design using Path Loss Models, Outdoor Propagation Models, Indoor Propagation Models.

Small Scale Fading and Multipath: Small Scale Multipath Propagation, Impulse Response Model of a Multipath Channel, Small Scale Multipath Measurements, Parameters of Mobile Channels, Types of Small Scale Fading (all variations), Statistical Models – Clarke's Model for Flat Fading, Jake's Model, Level Crossing Rate, Simulation of Clarke's/Jake's Model, Two Ray Rayleigh Fading Model, Problem Solving.

UNIT -3

Equalization & Diversity Techniques:

Equalization: Survey of Equalization Techniques, Linear and Non-linear Equalizers – Linear Transversal Equalizer, Decision Feedback Equalizer (DFE), Algorithms for Adaptive Equalization – Zero Forcing, LMS, RLS, Fractionally Spaced Equalizers.

Diversity Techniques: Realization of Independent Fading Paths, Receiver Diversity – System Model, Selection Combining, Threshold Combining, Maximal Ratio Combining, Rake receiver, Equal Gain Combining, Transmit Diversity–Channel known at Transmitter, Channel unknown at Transmitter – the Alamouti Scheme, analysis.

UNIT - 4

Multiple Access Techniques & Networking:

Introduction to Multiple Access: FDMA, TDMA, CDMA, SDMA, Packet Radio, Capacity of Cellular Systems, Problem Solving.

Introduction to Wireless Networking: Introduction to Wireless Networks, Differences between Wireless and Fixed Telephone Networks, Development of Wireless Networks, Traffic Routing in Wireless Networks, Wireless Data Services, Common Channel Signaling.

UNIT - 5

Multicarrier Modulation:

Data Transmission using Multiple Carriers, Multicarrier Modulation with Overlapping Subchannels, Discrete Implementation of Multicarrier Modulation, The Cyclic Prefix, Orthogonal Frequency Division Multiplexing (OFDM), Matrix Representation of OFDM, Vector Coding, Challenges in Multicarrier Systems, Problem Solving.

M.Tech (PTPG) IV SEM (DECS)

SPEECH PROCESSING

(ELECTIVE - IV)

L	T	P	C
4	0	0	4

Course Objectives:

- To understand how speech signals are processed for Analysis and Synthesis. Also to understand speech processing in the context of its creation (anatomy, classification of sounds, etc.) as well as in its perception (psychology & neuroscience).
- To analyze tools that are needed for analysis and synthesis, in the areas of digital signal processing for time-frequency analysis.

Learning Outcomes:

- After completing the course, the student will be familiar with the principles and the techniques used in speech processing. This includes speech synthesis, speech coding and speech recognition.

UNIT I

Fundamentals of Digital Speech Processing: Anatomy & Physiology of Speech organs, the process of speech production, the acoustic theory of speech production, Digital models for speech signals.

Time Domain Models for Speech Processing: Introduction- Window considerations, Short time energy and average magnitude Short time average zero crossing rate ,Speech vs silence discrimination using Average energy and zero crossing, Pitch period estimation using parallel processing approach, The short time autocorrelation function, The short time average magnitude difference function, Pitch period estimation using the autocorrelation function.

UNIT II

Linear Predictive Coding (LPC) Analysis: Basic principles of Linear Predictive Analysis: The Autocorrelation Method, The Covariance Method, Solution of LPC Equations: Cholesky Decomposition, Solution for Covariance Method, Durbin's Recursive Solution for the Autocorrelation Equations, Comparison between the Methods of Solution of the LPC Analysis Equations, Applications of LPC Parameters: Pitch Detection using LPC Parameters, Formant Analysis using LPC Parameters.

UNIT III

Homomorphic Speech Processing: Introduction, Homomorphic Systems for Convolution: Properties of the Complex Cepstrum, Computational Considerations, the Complex Cepstrum of Speech, Pitch Detection, Formant Estimation, The Homomorphic Vocoder.

Speech Enhancement: Nature of interfering sounds, Speech enhancement techniques, Spectral subtraction, Enhancement by re-synthesis.

UNIT IV

Automatic Speech Recognition: Basic pattern recognition approaches, Parametric representation of speech, Evaluating the similarity of speech patterns, Isolated digit Recognition System,. Continuous digit Recognition System

Speaker Recognition: Recognition techniques, Features that distinguish speakers, Speaker Recognition Systems: Speaker Verification System, Speaker Identification System.

UNIT V

Hidden Markov Model (HMM) for Speech: Hidden markov model (HMM) for speech recognition, Viterbi algorithm, Training and testing using HMMS, Adapting to variability in speech, Language models.

SOFTWARE DEFINED RADIO

(ELECTIVE - IV)

L	T	P	C
4	0	0	4

Course Objectives:

- To study about requirements, benefits and different models for Software Defined Radio
- To study in detail about Soft ware Defined Radio Architectures for performance optimization
- To get complete knowledge regarding functioning of different blocks and techniques associated with Software Defined Radio.

Learning Outcomes:

After completion of this course the students will be able to

- Analyze requirements, benefits and different models for Software Defined Radio.
- Understand in detail about Soft ware Defined Radio Architectures for performance optimization.
- Gets complete knowledge regarding functioning of different blocks and techniques associated with Software Defined Radio.

UNIT-I

Requirement for Software defined radio, Benefits of multi-standard terminals, Operational requirements, models for SDR, Smart antenna systems,

UNIT - II

Software defined radio architectures, Hardware specifications, Digital aspects of Software defined radio, Current technology limitations, minimum power consumption, ADC performance trends

UNIT-III

Flexible RF receiver architectures, Digital receiver, Single carrier and multi-carrier designs, under-sampling, oversampling, Noise figure, Receiver sensitivity, ADC spurious signals

UNIT-IV

Multiband Flexible receiver design, RF Transmit / receive switch, Image rejection mixing, Dynamic range enhancement, Feed forward techniques, cascaded non-linearity techniques

UNIT - V

Flexible transmitters,, Power amplifiers, Analog quadrature up conversion, Interpolated band pass up conversion, PLL based modulator transmitter, All-pass filtering, Poly-phase filtering

MULTIMEDIA COMMUNICATIONS

(ELECTIVE - IV)

L	T	P	C
4	0	0	4

Course Objectives:

- To study basic requirements of Multimedia Communications.
- To study about different coding schemes involved in Multimedia Communications.
- To study about different standards and protocols related Multimedia Communications and its networks.

Learning Outcomes:

After completion of this course the students will be able to

- Gets knowledge regarding fundamentals of Multimedia Communications
- Understand about different coding schemes involved in Multimedia Communications. Gets complete knowledge regarding different standards and protocols related Multimedia Communications and its networks.

UNIT-I

Multimedia communications - multimedia requirements, Audio Visual integration - Lip synchronization, Audio-to-visual mapping, Bio-model person verification, Joint Audio-Video coding

UNIT - II

Multimedia information processing, Perceptual coding of digital audio signals - hybrid coder - differential perceptual audio coder, Image coding, Video coding, Water marking

UNIT-III

ANNS for multimedia processing - NN techniques for motion estimation, face detection and recognition, Distributed multimedia systems, IP based networks, Multimedia Operating Systems.

UNIT-IV

Multimedia Communication Standards - overview of MPEG 1 ,MPEG-2, MPEG-4 and MPEG-7., Real time multimedia transmission across the Internet

UNIT - V

Multimedia Communication across networks - packet audio / video , Streaming video across internet, Multimedia transport across IP/ATM Networks and Wireless networks
